In 2024, net solar power generation in the United States reached its highest point yet at 218.5 terawatt hours of solar thermal and photovoltaic (PV) ...

The contribution of solar energy (including concentrating solar power (CSP) and solar photovoltaic (PV) power) to global electricity production, as one form of renewable energy sources, is ...

The latest 2021 annual statistics show that 3.9% of US electricity comes from solar power, up from 3.2% the previous year. Solar provided 0.95% ...

Solar photovoltaic and solar thermal power plants provided about 4% of total U.S. utility-scale electricity and accounted for 18% of utility-scale electricity generation from renewable sources ...

Overall, U.S. electricity generation rose by 3.1% year over year. Over the past 12 months, solar photovoltaic sources accounted for more than 6.8% of ...

Newsletter The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 ...

Percentage change in solar energy generation relative to the previous year. Data source: Energy Institute - Statistical Review of World ...

Last year, pv magazine USA correctly forecast that solar would reach 6.9% of total U.S. electricity generation based on the 35.3 GW of new capacity ...

In 2024, solar represented 13.7% of net summer capacity and 6.9% of annual generation. EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in ...

Annual proportion of solar power generation

All solar segments set annual installation records except for residential solar, which experienced its lowest year of new capacity since 2021. The factors driving installation growth in ...
