The contribution of solar power to Australia's overall electricity supply continues to rise, supported by favourable solar resources and sustained investment. On a ...

The latest energy data highlights the growing importance of solar as a key source of electricity generation in Australia.

Household solar electricity generation increased 20-times over the same period and now accounts for approximately 8% of total economy-wide ...

Australia has ambitious goals of becoming a renewable energy superpower. The country has vast natural resources and a renewable energy ...

OverviewInstallations by typePotentialIncentivesSupply chainRenewable energy targetsProjectsSee alsoSolar power is a major contributor to electricity supply in Australia. As of June 2025, Australia's over 4.16 million solar PV installations had a combined capacity of 41.8 GW photovoltaic (PV) solar power. Solar accounted for 19.6% (or 46.7 TWh) of Australia's electrical energy production in the National Electricity Market and South West Interconnected System in 2024.

Conversely, low-carbon energy types account for nearly 40% of Australia's electricity supply, showcasing the country's transition towards sustainability. ...

In 2024, 36% of Australia's total electricity generation was from renewable energy sources, including solar (18%), wind (12%) and hydro (5%). The share of ...

The record came as Australia went past another milestone, with renewable energy supplying more power than fossil fuels in a quarter for the first ...

Australia's solar power accounts for the total electricity generation

Trivia: More than 1.6 million rooftop solar PV systems have been installed in Australia. These systems collectively represent more than 5.2 ...

Households and businesses are playing a leading role in Australia's renewable energy transition. Rooftop solar now accounts for 11.2 per cent of ...
