Because the efficiency of electricity generation varies by type of solar panel, we conducted a sensitivity analysis to compare our baseline mono-Si panels with two lower-efficiency, ...

This study reveals the potential for power generation and the optimal timing and location for installing PV panels in global open-pit mining patches.

Astron is focused on developing the globally-significant Donald deposit, a fine-grained heavy mineral resource in Victoria, Australia. Mineral sands produce titanium, zircon, and rare earth elements.

Amrun, Weipa's newest mine, was completed in 2018 and will extend the Weipa bauxite operations by decades, significantly building on our 60-year history on Western Cape York, and providing jobs and ...

ASTANA - Iluka Resources, an Australian mining company, is investing approximately 4 million Australian dollars (US\$3.1 million) in geological exploration of titanium-zirconium deposits in the ...

Owing to the intrinsically low uranium content of the source mineral, all products emit lower levels of natural radiation than most other zirconium materials on the ...

Installation has been completed of all 66,000 solar panels at one of the biggest renewable energy installations at a single mining project.

From everyday applications in the home and workplace, to medical, lifestyle and industrial applications, the unique properties of titanium dioxide and zircon are ...

The site contains significant reserves of zirconium, titanium, and rare earth elements, including neodymium and praseodymium. The land is currently arable ...
