-----

Scientists have successfully tested a device that is capable of converting infrared heat into electrical power.

Now, researchers within the School of Photovoltaic and Renewable Energy Engineering at UNSW Sydney have successfully tested a device capable of converting infrared heat into electrical ...

Using technology similar to night-vision goggles, researchers have developed a device that can generate electricity from thermal radiation. The sun's enormous energy may soon be ...

University of New South Wales researchers are developing electricity generation from infrared radiation at night using a semiconductor device known ...

A thermoradiative diode, developed by scientists at UNSW can convert infrared radiation into electricity. The team hopes it could be used to power satellites in space.

A team of researchers from UNSW has developed a technology that can generate electricity at night by harnessing heat in the form of infrared light. ...

As long as thermoradiative diodes are warmer than their surroundings, they will emit infrared radiation and generate electricity.

Innovative research from a UNSW team shows Earth's radiant infrared heat can be used to generate electricity, even after the sun has set. ...

"In the same way that a solar cell can generate electricity by ...

Researchers from the University of New South Wales's School of Photovoltaic and Renewable Energy Engineering have now successfully tested ...

# Can solar infrared generate electricity
