-----

We propose an interdisciplinary framework for evaluation of residential demand response. Results from a one-year Swedish DR field trial are presented. Household characteristics were ...

As a cornerstone of smart grid, demand response aims at stimulating end-use consumers to change their electricity consumption patterns through a series of technical and economic approaches.

The Commission is empowered to establish a network code on rules implementing Article 57 of the Regulation and Articles 17, 31, 32, 36, 40 and 54 of the Electricity Market Directive in relation to ...

Demand response (DR) has been widely documented as a potential solution for several challenges the electrical power system is facing, such as the integration of intermittent renewable electricity...

Through industry-leading optimization and trading of energy assets like wind and solar farms, battery systems, and EV chargers, we make renewable energy reliable and predictable, leading the charge ...

In this thesis, control and scheduling studies using demand response, and consumer load models adapted to environments similar to Sweden are pro-posed and evaluated.

By utilising the potential in the electricity market for so-called demand flexibility, or demand side response (DSR), which aims to reduce demand during stressed hours, the market can minimise the ...

Results of computational experiments on the case study of Stockholm, Sweden reveal that integration of demand-responsive transport in the disruption management can bring large positive...

In April of 2023, the Swedish grid experienced electricity supply disturbances in Stockholm's area due to a power outage during maintenance ...
