This paper reviews the recent works on the Electromagnetic Fields (EMF) radiation assessment for 5G base stations (BS) on human evaluation and analysis from different perspectives. The review covers ...

Assessing human exposure to an electromagnetic field in presence of a 5G base station is not an easy task. The implementation of M-MIMO techniques in 5G base stations results in adaptive ...

In this work, monitoring of the transmit power for several base stations operating in a live 5G network (Telstra, Australia) was conducted with the purpose of analyzing the radio frequency ...

This paper selects several typical scenes (Open spaces, building concentration areas, user and building intensive areas) for electromagnetic radiation monitoring, and analyzes the ...

The results show that the factors that have significant impacts on the environmental radiation power density of 5G base stations including transmission distance, base station...
