The EU installed a record 27.1 GWh of new battery storage capacity in 2025, driven by utility-scale projects that accounted for over half of new additions as the bloc races to build the ...

By recognising storage systems under EU funding mechanisms and grid planning processes, the EU can unlock their full potential, not only in stabilising energy supply and maximising...

For the twelfth consecutive year, the EU achieved a record level of battery storage installations, driven primarily by utility-scale projects. Residential installations declined. The rapid ...

Discover the evolving policies and regulations of the European Union and United Kingdom, with both issuing landmark legislation in the energy storage.

This position paper, prepared by the Energy Storage Europe Association, assesses the system value of long-duration energy storage, identifies barriers to ...

Energy storage system operator Energy Cells provides the service of isolated mode power reserve. Four battery parks system, with a total of 200 ...

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels ...

EU battery cell manufacturing capacity was 252 GWh in 2025 and over 90% of capacity is directed at electric vehicles rather than stationary storage, according to SolarPower Europe.

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, ...
