---

Explore Europe's 2024 solar boom, with gigawatt-scale projects in Germany, Spain, and beyond driving a historic shift in the continent's energy landscape.

Most EU solar systems are built on rooftops, minimising the need for additional land and reducing potential conflicts with nature. ...

Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Deploying photovoltaic (PV) on rooftops, water bodies such as hydropower reservoirs, and along roads and railways could push the EU total installed capacity in excess of 1 TWp without ...

The revised Energy Performance of Buildings Directive will speed up the uptake of solar photovoltaics and solar thermal - both on residential and ...

Members of European Parliament (MEPs) have adopted the EU Solar Standard, which will require the installation of solar on buildings ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to ...

SolarPower Europe is a member-led association that aims to ensure that more energy is generated by solar than any other energy source by 2030. Welcome to the second edition of ...

The cumulative installed solar PV capacity of the EU-27 Member States reached 269 GW at the end of 2023. It has multiplied over 2.500 times since the beginning of the millennium, when the ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power

# EU Solar Photovoltaic Power Generation Construction

is growing in every EU country.
