-----

Free and open access to photovoltaic (PV) electricity generation potential for different technologies and configurations. Available in English, French, Italian, ...

While solar photovoltaic (PV) installations are booming in Europe (and in other parts of the world), the local industry is closing down. In 2023, an estimated total of nearly 60 gigawatts (GW) of new solar ...

One of the most striking challenges, according to Schierenbeck, ...

This latest report highlights the rapid changes taking place at European manufacturing facilities and across their supply chains. These shifts, ...

Solar PV manufacturing capacity by component in Europe, 2021-2024 - Chart and data by the International Energy Agency.

This essential resource is developed with contributions from SolarPower Europe's members and various national solar associations. It aims to assist policymakers, industry ...

The investment conditions for PV production in Europe have partially improved due to funding being allocated within EU and national budgets. This is ...

Europe is planning a major ramp-up of solar-photovoltaic (PV)-based electricity to address its energy challenges, which include meeting its ...

If this target is met, solar PV will become the largest source of electricity production in the EU by capacity. Not only that, but the rate of solar deployment will be faster than any other; plans for ...

For the first time, solar energy surpassed coal in European electricity production in 2024. The surge in kilowatt-hour prices observed from 2021 onwards prompted more and more individuals ...
