A key contribution of this study is the development of a methodological framework for qualitatively classifying and evaluating these ports ...

This thesis employs a qualitative analysis using a dual case-study analysis, and with data triangulation to deeper investigate the rationale behind the continued discrepancy in capital-labour ratios in both ...

A survey-based analysis of global terminal operators identifies how they implement their automation and the time necessary for terminal operators to start realizing a return on their investment. The results ...

It assesses the effects of automation on port performance, handling costs and safety, and the extent to which automation projects have achieved their objectives. Finally, the report identifies policy issues ...

Novel simulation models are developed to comprehensively evaluate layout design in automated terminals. Models consider special operation characteristics, cycle operation processes ...

In this paper, we will explore the push for automation in container terminals, the unique challenges it presents, and the strategies needed to achieve high-performance and efficiency in automated ...

A dataset was compiled covering all 63 automated container terminals, their organizational features, technical dimensions, and the maritime and urban markets they serve.

With this project, the utopia of automated ports has taken a significant step forward, with more to come in terms of modernization. Highly automated and specially ...

The paper describes key equipment and technology components of an automated container terminal operation, outlining the various approaches already adopted and those presently under consideration ...
