INTEC Energy Solutions and AUKERA have launched the delivery of a 50 MWp solar power plant in Lachendorf, Germany. The project will generate 50.85 GWh of clean electricity ...

The strongest net electricity producer was wind power, followed by photovoltaics, which increased its production by 21 percent and thus overtook ...

The animated graphics demonstrate the role already played by photovoltaics in generating electricity in Germany today, and show that PV systems also contribute to reducing the high cost of ...

Discover all statistics and data on Solar photovoltaics in Germany now on statista !

The list includes all existing power units in Germany with a net rated capacity of 10 MW or more per location. It also includes plants in Austria, Denmark, ...

Regardless of future breakthroughs in panel development, German citizens already embrace solar power as their favourite form of renewable ...

Here you can find the rating of the top biggest solar photovoltaic plants located in Germany. The list contains only megawatt-scale ground-mounted PV stations and parks connected to the power grid ...

Germany produced 18% of its electricity through solar power in 2025, up from 14% in 2024, a significant leap that meant solar overtook both coal and ...

Solar installations generated around 87 TWh of electricity in 2025. Of this, approximately 71 TWh was fed into the public grid and 16.9 TWh was self-consumed. Total production increased compared to ...

German solar power station power generation

administration in the United States, oil prices decreased and the US removed most of its policies that supported its solar industry. Government subsidies were higher in Germany (as well as Japan), which prompted the solar industry supply chain to begin moving from the US to those countries. Germany was one of the first countries to deploy grid-scale PV power. In 2004, Germany was the first country, together with Japan, to reach 1 GW of cumulative installed PV capacity. Since 2004 solar pow...
