Data and analysis including a list of solar power in every ...

In 2030, renewable energy sources are used for 46% of global electricity generation, with wind and solar PV together making up 30%. By 2030, ...

Record renewables growth led by solar helped push clean power past 40% of global electricity in 2024, but heatwave-related demand spikes led to a small increase in fossil ...

There is no doubt that solar power has become the driving force of the global energy transition. Looking ahead, however, there remain challenges that must be addressed ...

The Global Solar Power Tracker is composed of worldwide facility-level data on utility-scale (1 MW+) solar photovoltaic (PV) and solar thermal ...

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity ...

Discover all statistics and data on Global solar energy outlook now on statista !

A comparison of the solar power status among countries and territories has been provided, considering their concentrated solar power and PV installed capacities for each ...

The Global Solar Atlas provides a summary of solar power potential and solar resources globally.
