China is pioneering a new frontier in renewable energy with the Stratospheric Airborne Wind Energy System (SAWES). This cutting-edge ...

According to Weng Hanke, chief technology officer of Linyi Yunchuan, the S2000 system relies on a helium-filled aerostat to lift a ...

World's first megawatt-class urban-used high-altitude wind power system - the S2000 Stratosphere Airborne Wind Energy System (SAWES) - completes its test flight in Yibin, Southwest ...

Wind power could soon come from the sky as China has successfully tested a megawatt-class airborne turbine that generates electricity while hovering 2000 metres up.

The system has recently completed a test flight, successfully generating electricity from high-altitude winds without the need for towers or substantial ground infrastructure.
