PV supplied more than 10% of global electricity consumption for the first time, cementing its position as a central pillar of the global energy transition. At a ...

GEM data included 185 GW of solar and wind farms that were under construction as of December 2023 and designated to become operational before the end of 2024. Globally, only 59% of these projects ...

Despite global price drops across the PV supply chain, PV manufacturers have generally remained profitable, thanks to increases in sales volumes (particularly for N-type cells).

The PV industry refers to the sector involved in the production and deployment of photovoltaic systems, which are essential for the transition to renewable energy by reducing toxic gas emissions and ...

From 2016 to 2022, PV has seen an annual capacity and production growth rate of around 26%, doubling approximately every three years.

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

Photovoltaic (PV) solar accounted for 58% of all new electricity-generating capacity additions through the third quarter of 2025, remaining the dominant form of new electricity-generating ...

The increase in solar PV capacity is set to more than double over the next five years, dominating the global growth of renewables. Low costs, faster permitting ...

The solar photovoltaic sector is by far the largest employer in the renewable energy industry, accounting for over 7.2 million jobs worldwide. The report calls for stronger public action to...
