The modern electric grid wastes a tremendous amount of power generation when demand isn't peaking, and battery systems-- whose tax ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

From Texas-sized utility projects to skyrocketing residential battery attach rates, 2026 marks the year solar and storage transition from the electric grid's fastest-growing additions to its ...

The tech giant's latest project pairs massive renewable energy capacity with a 100-hour battery to support data center operations.

New storage technologies are driving down costs and are powering a resilient, decentralized grid for a Solarpunk world. Big batteries capable of storing ...

Solar power makes up 51% of the planned 2026 capacity additions, followed by battery storage at 28% and wind at 14%. In 2025, 53 GW of new capacity was added to the grid, the largest ...

While fossil fuel generation still supplies a portion of their energy needs, battery storage offers a faster transitional solution until large-scale renewable generation capacity expands.

Solar and battery storage are set to account for 79% of 86 GW of new utility-scale capacity planned in the United States in 2026, marking the largest annual increase in more than two decades ...

The amount of solar energy in the U.S. is growing and surpassed the 100-gigawatt mark this year. Another way that the addition of these batteries is helpful to the ...

Large-capacity battery solar power generation

EIA reports U.S. developers plan to add 86 GW of power capacity in 2026, led by solar, battery storage, wind, and natural gas projects.
