With the energy density increase of energy storage systems (ESSs), air cooling, as a traditional cooling method, limps along due to low efficiency in heat dissipation.

Innovation individual rack based liquid cooling technology with cell temperature difference controlled within $2\text{--}3^{\circ}\text{C}$ and prolonged life cycle above 20% with minimum service interventions during the life span.

Four ventilation solutions based on fan flow direction control are numerically simulated, and their internal airflow distribution and thermal behavior are analyzed in detail.
