A team of engineers announced a revolutionary new Solar Thermoelectric Generator (STEG) device that turns heat differences into ...

His lab's innovative black metal technology design helps create a STEG device 15 times more efficient than previous devices, paving the way for new renewable energy ...

A Rochester team engineered a new type of solar thermoelectric generator that produces 15 times more power than earlier versions.

The new, high-efficiency STEGs were engineered with three strategies. First, on the hot side of the STEG, the researchers used a special black metal technology developed in ...

Scientists from the University of Rochester have invented a new "black metal" solar thermoelectric generator (STEG) etched with ...

His lab's innovative black metal technology design helps create a STEG device 15 times more efficient than previous devices, ...

This study proposes a solar-driven thermoelectric generation system that combines a novel hybrid reflector with radiative cooling to enhance power generation. Thermal analysis established a ...

Using a "black metal technology" developed in the lab, and laser-etching nanoscale structures into these STEGs, the team increased ...

Discover how black metal technology and better heat management can create a solar thermoelectric generator 15 times more ...
