It's still early into 2025--and the dead of winter--yet solar is meeting nearly 100% of California's grid demand. Solar energy generation is up 33.5% year over year ...

The California Independent System Operator (CAISO), the grid operator for most of the state, is increasingly curtailing solar- and wind-powered electricity generation as it balances supply ...

Topped up by batteries charged by excess solar output in the middle of the day, the swell in California's solar-powered electricity supplies has ...

California has over 49,000 MW of installed capacity and solar supplies more than 31 percent of California's electricity today, but it must play a bigger role if the state is to reach climate and energy ...

Over the past year, solar generation surpassed natural gas to become California's leading source of electricity, a milestone expected to persist.

This chart shows the historical minimum and maximum monthly hydroelectric generation reported for California since 2001 as well as monthly generation for ...

But as California works toward its ambitious clean energy vision, an almost counterintuitive challenge has emerged: The state is, at times, ...

California's electricity mix includes 29% Solar, 26% Gas and 18% Solar (Utility). Low-carbon generation reached a record high in 2025.

Want to know the latest statistics about solar energy in California in 2025? See the facts here from original research conducted by the Forbes Home ...
