Solar PV generated approximately 10 per cent of Australia's electricity in 2020-21, and is the fastest growing generation type in Australia. More than 30 per cent of Australian households now have ...

Over 40% of Australian free-standing homes now operate rooftop solar systems, supported by government incentives that provide upfront capital ...

Note that we have used utility-scale solar as a share of generation as solar generators and others compete to supply and balance the operational demand and exports, while household solar PV does ...

Estimated photovoltaic output as a percentage of its maximum capacity in each state, including forecast performance. Performance data are sourced at ...

This report provides a comprehensive overview of the Australian PV market, which recorded strong growth in 2024 and achieved a cumulative installed capacity of ...

This release includes household solar electricity generation in the Australian National Accounts (ANA) for the first time. Our new approach ...

In 2024, 36% of Australia's total electricity generation was from renewable energy sources, including solar (18%), wind (12%) and hydro (5%). The share of ...

Small scale solar electricity generation information is based on live data sourced from the Australian PV Institute (APVI) solar map application.
