---

Solid-state supercapacitors (SSCs) hold great promise for next-generation energy storage applications, particularly portable and wearable electronics, implementable medical devices, ...

NLR continues to explore refinements and new options, such as lithium-air, magnesium-ion, and solid-state technologies to power a variety of applications. Learn more about other projects ...

This project will test and validate a new long duration energy storage technology that, once commercialized, has the potential to achieve an order of ...

This study aims to estimate the future of SSBs; three cases are developed to project the prices of SSBs from 2023 until 2030.

Though full-scale deployment may still be years away, the convergence of scientific and industrial advances indicates that solid-state batteries are on track to reshape energy storage across ...

Guided by industry, CEPS will expand these areas through industry-driven research projects leading to safe and sustainable solid-state next-generation energy storage for portable, automotive, and electric ...

Solid-state hydrogen storage technology has emerged as a disruptive solution to the &quot;last mile&quot; challenge in large-scale hydrogen energy applications, garnering significant global research attention.

The Department of Energy (DOE) Loan Programs Office (LPO) is working to support deployment of energy storage solutions in the United States to facilitate ...

These projects encompass various technologies including 1. solid-state batteries, 2. supercapacitors, and 3. thermal energy storage systems, each ...

# Solid-state energy storage application projects

We are the Supermaterial Applications Company We use supermaterials to build products that transform the biggest industries on the planet. Battery Systems ...
